

## Industry

TIC (Testing, Inspection and Certification)

## Customer

The company provides inspection and testing services, performing analysis on various products, including biofuel, petroleum, petrochemicals, and agricultural commodities.

## Customer need

They wanted to accurately capture the employees logging hours and locations and automatically export all the data to ADP Workforce Now® without any manual process. Since they had workers working the overnight shift, they wanted to split out the logged time hours before and after midnight for the employees to comply with the State OSHA regulations.

## New workflow with allGeo

allGeo deployed a workflow to track the employee's location and record their clock-in and out times. Additionally, an allGeo rule was created for the users working overnight/multi-day shifts to split their hours. The rule scans the hours of service and splits the data between pre-midnight and post-midnight shifts.

With the integration between allGeo and ADP Workforce Now® in place, employee logs are scheduled to be exported to ADP every day.

Here are the key reports generated to capture various aspects of their workflow:

- **Breadcrumb Report** that provides the location trails of the employees for a particular date range. The location trails can also be seen in allGeos map view.
- **Standard Manual Report** that shows the time and location of every start day and end day punches and the hours spent between them.

**600+**  
Employees
